GREEN VALLEY MANUFACTURING RESPONDS TO INDUSTRY DEMAND FOR HEAVY DUTY TRAILERS

Green Valley Manufacturing has been called upon to design and build a number of high capacity heavy duty trailers reflecting a new demand in the industry as tools and dies increase in size. **Titan** trailer design focus has always been to combine high capacities in a small footprint, although a 40,000 lb. capacity caster steer trailer just left the shop with a bit larger footprint at 8'x 22'. Each trailer is designed for the customer's unique application regarding deck design, size, capacity, steering, and mobility

Recently built trailer design load capacities have been in the range of 2500 lbs. to 104,000 lbs., while steering mobility design specs include fifth-wheel counter steer trailer with dual tongue, scooter trailer with pockets for 4-side fork access, single tongue caster-steer, and four wheel steer. More **Titan** trailers are currently in the design or production phase as the demand continues.
