Mini-Titan Die Cart

Introducing the

Green Valley Manufacturing's Standard Light Duty Die Cart

The Mini-Titan, the new standard die cart line, offers a 250 to 2,000 lb. capacity range and will demonstrate the same great quality and longevity and many of the great features that built the Titan name. The Mini-Titan series is much safer and faster than using a forklift or manual pump cart and is designed with a variable height deck (or decks) with manual cart mobility via ergonomic push handle. The transfer deck options include single or dual over & under decks, ball rollers, inline roller, steel, and low friction UHMW surface. The standard design allows Green Valley to respond to its customers' die handling needs with minimal lead times.

The Mini-Titan next to a custom
full sized Titan over/under cart

This Mini-Titan has a capacity of 800 lbs. and features floor mounted docking rail brackets to guide cart to precise transfer location. It has custom designed forks, and standard hydraulic mast lift system and operator safety screen.

This Mini-Titan over/under model with companion rack reduces costly downtime.

This Mini-Titan has a capacity of 800 lbs., a ball roller deck with 3-side removable die stops, an ergonomic push handle, and a foot operated floor lock.

Upgrade your cart to our standard Titan with powered drive and powered push/pull features.
