

August Feature: Unmanned, Automatic Docking, Wire Guided,
Covered Plant to Plant Transport System!

Titan 173777 Unmanned
Transporters

Please click for a video at our end user's facility.

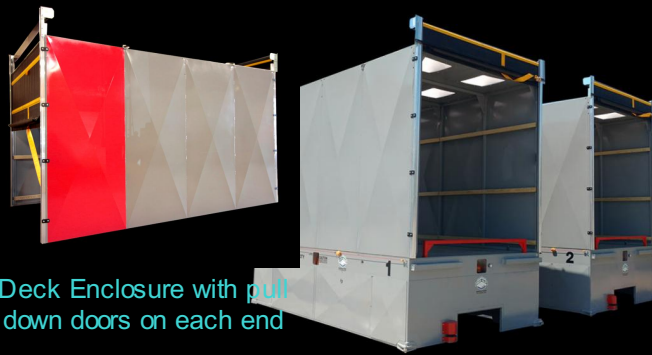

Our customer needed a solution to send parts between two plants to reduce fork truck & semi traffic, minimize labor, and to keep parts dry and safe. We combined our transporter and programming expertise to develop the Titan 153777 wire guided covered transport system. The transporters can be easily loaded and sent from building to building with our in-ground wire loop, frequency generator, and Home and Away Control Stations driven by AC gear motors. Products can be loaded from opposing buildings or dually loaded and sent from the same plant depending on production needs. We engineered the system to tie into the existing loading docks and PitBull restraints which not only reduced project costs but also allows outside semi traffic to share the use of the docks with the transporters. These units were designed for a 6,000 lb. load but we are offering free ranging, wire guided, and rail transport systems in the +200,000 lb. range! We offer manual, radio controlled, wired, and automatically guided systems. If you have a building to building, bay to bay, or complex path you need to move a large load, contact Green Valley Manufacturing and let us develop a system for you!

Features:

Titan 173777 without Deck Enclosure

- Battery powered, inverter controlled AC drive motor
- Safety collision sensors
- Auto-charging battery sequence
- Automatically guided by wire with RFID sequencing for docking
- Vinyl pull down doors on each end
- Made in USA

Deck Enclosure with pull down doors on each end

New Custom Designs from the Work Horse Team

20,000 lb capacity (per stand) work stands with optional tool shelf on bottom

Shown without tool shelf

Our [Heavy Duty Industrial Steel Sawhorses](#) (work stands) can be designed to meet the capacity, height, and configuration needed in the manufacturing environment. Staging of the sawhorses can be done easily without cranes or forklifts. No heavy lifting required, even though the horses weight about 400 pounds each.
